DETAILED ACTION

The finality of office action dated 19 October 2006 is hereby withdrawn a non final office action on merits, presented.

Response to Arguments

- 1. In response to applicant's arguments filed 19 December 2006 have been fully considered. In regards to claim 7, examiner made a typographic error instead of Rodriguez et al.'s name examiner used Chen et al.'s name but as stated in rejection ground based on 103(a) is valid. In regards applicant's argument to motivation applicant's claim 1, claims the detachable connector for establish electrical connection to electronic circuit. and Cama et al.'s reference teaches the utilization of similar technique for connector (column 1, line 55-65), in regards to applicant argument Rodriguez et al. fails to examiner disagree with applicant because Rodriguez et al.'s collumn3, line 55-65 disclose the utilization printed circuit board and for dielectric coating also disclose by Rodriguez et al. (column 4, line 1-5).
- 1. Applicant's arguments with respect to claims 1-21 have been considered but are most in view of the new ground(s) of rejection.

Application/Control Number: 10/717,887

Claim Rejections - 35 USC § 103

Page 3

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1 and 14-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rodriguez et al. (U.S. Patent # 4,622,627) in combination with Cama et al. (U.S. Patent # 6,211,457B1).

Rodriguez et al. disclose the claimed subject matters an electronic power supply (figure 1-3), including an encapsulated portion and circuit board (Abstract, line 15-20), a dielectric material (column 3, line 65-70 and column 4, line 1-5) and output connector at terminals (figure 3, item 66 and 66'). However Rodriguez et al. does not disclose the utilization of the technique for an integrated connector. Cama et al. teaches the utilization of the similar technique for an integrated connector (figure 1, item 18). It would have been obvious one having an ordinary skill in the at the time the invention was made to modify Rodriguez et al.'s power supply by technique taught by Cama et al. for the purpose or securing firm connection with external devices.

Art Unit: 2838

3. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rodriguez et al. (U.S. Patent # 4,622,627) in combination Nakamura et al. (U.S. Patent # 4,906,208).

Rodriguez et al. disclose the claimed subject matters an encapsulated power converter (figure 1). Rodriguez et al. does not disclose the utilization of the technique for a detachable line cord connector with threaded mounts is earth grounded. Nakamura et al. teaches the utilization of the similar technique for a detachable line cord connector with threaded mounts and earth ground (column 3, line 35-40). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Rodriguez et al.' power supply by utilizing the technique taught by Nakamura et al. for the purpose of providing encapsulated power supply.

4. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cross (U.S. Patent # 5,615,097) in combination with Rodriguez et al. (U.S. Patent # 4,622,627).

Cross discloses claimed subject matters an alternating current to direct current power converter (figure 1), including a current limiting means and MOSFET switch (figure 1, item 52), a bridge rectifier (figure 1, item 12), a capacitor charged via current limiting source (figure 1, item 54), a voltage level detection (figure 1, item 56), a resistive path (figure 1, item 50). Cross does not disclose the utilization of the technique for an encapsulated power converter. Rodriguez et al. teaches the utilization of the similar technique for an encapsulated power converter. It would have been obvious one having

Application/Control Number: 10/717,887

Art Unit: 2838

an ordinary skill in the art at the time the invention was made to modify Cross's power

converter encapsulated for the purpose of improved mechanical integrity, power density

and thermal performance.

Allowable Subject Matter

5. Claims 2-6,9-13 and 17-21 are objected to as being dependent upon a rejected

base claim, but would be allowable if rewritten in independent form including all of the

limitations of the base claim and any intervening claims.

6. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Rajnikant B. Patel whose telephone number is 571-272-

2082. The examiner can normally be reached on 6.30-5.00; m-f.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Karl Easthom can be reached on 571-272-1989. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.
